About Radiology Department

The Department of Radiology and Imaging Sciences of Chettinad Hospital and Research Institute offers diagnostic services through wide array of imaging modalities, therapeutic and diagnostic interventions, performs academic activities by publications, presentations scientific conferences, conducts research based studies, executes projects organize conferences / workshops for education and also involves in patient care activities. We have installed technologically advanced, state-of-the-art medical equipment in our endeavour to provide the best diagnostic output. The department is also actively involved in pushing boundaries in the world of radiology and imaging through various research activities. The department participates in a broad range of research initiatives and translational research collaborations with every other department in the medical center, placing us at the forefront of advanced medical imaging. Many of these projects are performed in dedicated state-of-the-art Department of Radiology facilities. We are focused on making imaging advancements for the betterment of our patients, our trainees and the future of radiological sciences. This was possible by a dedicated team of Radiologists, technologists and allied health staff.
